Subject: Don't Miss out! Sign up now for AX200 & AX250
Date: Wednesday, February 20, 2019 11:01:01 AM

Hi Dennis,

Are you planning to attend the Techno Security & Digital Forensics Conference on March 11th? If so, don't forget to sign up for our upcoming training courses, AX200 and AX250, being offered in conjunction with the Techno Security & Digital Investigations Conference in San Diego.

AXIOM Examinations (AX200) is an intermediate-level course, designed for participants who are familiar with the principles of digital forensics, and are seeking to use Magnet AXIOM for their investigations. During this course, students will gain a deeper understanding of the benefits AXIOM's "artifact first" offers in optimizing investigative efficiency.

Magnet AXIOM Advanced Computer Forensics (AX250) allows students to advance their skill set through learning how to:

- Track computer access through PIN and picture passwords, Windows Hello, and biometric technologies such as fingerprint and facial recognition.
- Use Passware and the AXIOM Wordlist Generator to crack iTunes backups and Windows passwords.
- Dig deep into tracking drives attached to the Windows OS that may leave no other traces.
- Determine whether executable files were previously executed on the system, even if they no longer exist.
- Track file and folder location, usage, and history.
- Collect and parse RAM images for actionable intelligence

Join us from March 7th to 10th , just prior to the Techno Security & Digital Investigations Conference, and receive ***30% off your conference ticket*** using our discount code: **MAGNET19**

Register now!

Regards,

The Magnet Forensics Team
